# PROTECTAPEEL AEROSPACE PRESERVATION SYSTEM

## TWO PART SYSTEM:

### 1 PRESERVATION 1074

is a temporary peelable Aerospace protective **BASE COAT** designed for use as a long term, external or internal storage solution including mothballing of most non-porous surfaces including plastic, metal and painted surfaces. Colour is white. Coverage 3m² per litre. Minimum WFT 300 microns.

**2 PRESERVATION 1090** is the temporary **TOP COAT** component of the Preservation System. Preservation 1090 **IS NOT A PEELABLE COATING** and should only be used on top of Preservation 1074. **It CANNOT be used directly on surfaces.** Colour is clear. Coverage 6m² per litre. Minimum WFT 150 microns.

**The Preservation System is widely used across the aerospace industry. It provides reliable short and long-term protection, including full aircraft mothballing during extended storage. It ensures surfaces remain protected from damage, contamination and environmental exposure.**

### ENVIROMENTALLY SAFE

Protectapeel is a water based coating that can be disposed of safely in landfills. (No harmful chemicals).

### HOW IT WORKS

Applied by airless spray, it forms a continuous, airtight barrier over internal and external surfaces. **Base Coat safe on acrylic surfaces.**

### OTHER INDUSTRIES USING PROTECTAPEEL

Asbestos
Construction
Glass and Aluminium
Mothballing
Mining and Engineering
Marine
Motor Vehicle
Aircraft
Nuclear
Stadiums
Flooring
Manufacture
Masking
Signage
Chemical Milling

PROTECTAPEEL PAINT • PROTECT • PEEL

Peelable Coatings is the sole importer and distributor of Protectapeel products in Africa.
